

Tank Farm

Stolthaven/Houston, TX

Scope of work included the construction of a tank farm for twenty-one tanks.

In addition to placing all structural concrete, we provided support for the augured piling contractor. The twenty-one shovel top pancake foundations were supported on 75' deep augured piles and were cast to API tolerances. After the tanks were completed by others, we remobilized and constructed the containment walls, paving, pipe supports, lift stations and manifold pits. This fast paced project had many phases as well as numerous contractors working on site. Often times we received drawings only days before a new phase of work was to begin.
