

Pond Grading and Sitework

Teppco/Mt. Belvieu, TX

Scope of work included removal of sludge from pond bottom followed by the demolition of the existing liner and drain, the installation of the new drain and sump and the reshaping and grading of the sides and base of the pond to receive the new liner. Approximate size of pond was 580,000 sf.

Innovative process allowed for quicker, more efficient removal of sludge which expedited the completion of the project.
